

How to determine the date of production of Cermark cans

How to read the code at the bottom of Cermark Can

Cermark Ultra and LMM-6000 aerosol cans have a 6-digit code printed on the bottom:

The first digit indicates the production line.

The next three digits represent the Julian day of the year (001–365/366).

The last two digits indicate the year.

For example, the code 133524 can be read as:

Line: 1. (No showing in LMM14)

Julian day: 335 → December 1st

Year: 2024

This means the can was manufactured on December 1st, 2024.
The second line (09:16) indicates the exact production time, in this case 9:16 a.m.
